

MULTI-modal Imaging of FOREnsic SciEnce Evidence – tools for Forensic Science
Action Number: CA16101

My first STSM in framework of COST Action CA16101 have place at the University John Moores Liverpool, UK. The objectives of the STSM was to acquire accurate data of craniofacial soft tissue thickness for nasal landmarks of the Romanian adult population via computer tomography data.

During my STSM, my work was, in principal, to learn the steps that need to be taken in the reconstruction process and in the specialized facial reconstruction techniques. The experience during my first STSM was a good one, because I create connections with the FaceLab staff and also, the first STSM was an opportunity for the future collaborations and for my presence at the University with my second STSM.

I am really enjoyed of all activities during the STSM and the COST Action is a great opportunity for the PhD students and not only for mobilities between the European Universities which allow us to learn more, to do more research activity.
